

PERMEABLE CONCRETE ADDITIVE

G 02 - A A 1 9 1

CONSTRUCOLOR
Technology Solutions for the Construction Industry

G02-AA191 Permeable Concrete is a modified polymer that when applied in combination with cement and aggregates (non-thin), achieves a high porosity permeable concrete because of the high number of interconnected voids.

When mixed with white or gray Portland cement, aggregates and water in the recommended proportions, renders an excellent fluidity mixture and with high adhesion among the aggregates and towards the substrate. It also acts as a water reductor, hence incrementing the Permeable Concrete's resistance.

It is compatible with Water Based Acrylic Sealant S02-AA052, Liquid-Gel Integral Pigments B01, B02, B03 & B04, as well as with the Acrylic Ink and Stain.
