

ADDITIVE,
WATERPROOFING
&
ADHERENT
G01-AA021

The G01-AA021 Multiadditive for mortars is a solvent free and of easy dispersion in water. It was developed to offer a solution to multiple needs in the construction industry, such as:

- Integral waterproofing
- Abrasion resistance
- Flexibility
- Strong adherence

It's ample range of application has a magnificent performance in finishings, plasterings of roofs and walls as well as in the placing of tiles, blocks and in general, cement based pieces. It can also be used for stones such as quarry stones, marble and granite among others.

It is an adherent that avoids cold joints between old and new pourings. It also develops a repellence to water absorption and the outlet of liquid water, allowing it in its vaporous form. This eliminates the carrying of soluble salts towards the surface, hence avoiding the apparition of efflorescence or salt peter.

It's sunlight, outdoor conditions and alkalinity resistance, which allows for the permanence of its properties through time.
