SEALER & ACRYLIC WATER-REPELLENT

CURING MEMBRANE

The Sealer & Acrylic It adheres itself strongly to Water-Repellent Curing cement, stone or clay Membrane is a transparent, surfaces, it prevents solvent free & eco-friendly fluorescence or saltpeter by water based product. It was protecting the superficial developed to seal layer and increasing the horizontal or vertical sealers lifetime. When it's surfaces, as well as dry it produces a prefabricated pieces by transparent, high penetrating the pores and durability film that does providing water repelling not turn yellow nor does qualities. Its active dust adhere to it. water-repelling ingredient reacts with the substrate. It's highly resistant to sunlight, outdoor conditions and alkalinity, which allows for its permanence through time.
