

SELF-LEVELING OVERLAY

ARCHITECTONIC & SELF-LEVELING OVERLAY

The Architectonic & Self-leveling Overlays are specially formulated to be applied over new or old concrete or mortar floors that are meant to have an architectonic finish, as well as over old structurally sound floors that are in reparation need.

When mixed with grey or white cement, they produce mortars ready for pouring that have an excellent fluidity and are easily installed. They may have smooth or non-skid finishes that allow integral coloring as well as superficial coloring, acid and acrylic stains and designs created with cuts and or stensils.

It may be applied over concrete, tiles, stone, wood and almost any other fracture free surface.
